

FinAware — Service Communication: Assess Financial Risk

Implementation of the supplied UML sequence diagram · endpoints, ports and error branches as built

Boundaries

- Only Next.js is exposed (Ingress / published port). financial-api, financial-data and ml-service are ClusterIP / internal Compose services.
- Kubernetes NetworkPolicy: ml-service accepts traffic only from financial-api pods. /model-info returns metadata only — never model files, paths or env.
- Every hop uses callServiceJson(): connection failure → 503; ML call has a 15 s timeout (ML_SERVICE_TIMEOUT_MS). No OpenAI/LLM in this flow.

Legend:

Existing — unchanged

NEW — ML feature (additive)
